

The London Mathematical Society

# Algebraic Number Theory — Cassels and Fröhlich

First printed in 1967, this book has been essential reading for aspiring algebraic number theorists for more than forty years. It contains the lecture notes from an instructional conference held in Brighton in 1965, which was a milestone event that introduced class field theory as a standard tool of mathematics. There are landmark contributions from Serre and Tate. The book is a standard text for taught courses in algebraic number theory. This Second Edition includes a valuable list of errata compiled by mathematicians who have read and used the text over the years.

The book may now be ordered via the major online bookstores (e.g. Amazon UK, Amazon USA) or a small number are available directly from the LMS using this form.
